

Project Presentation #2

Synchronization between display
objects and representation templates
in graphical language construction

François Helg
Fabien Rohrer

Assistant :
Frédéric Fondement

Overview

- François
 - Reminder
 - Goal of the project
 - Theoretical issues
 - Problematic
 - Key technologies
 - Fabien
 - What we have already done
 - What we're working on
 - Problems
 - To do

Plan

- Reminder
- What we have already done
- What we're working on
- Problems
- To do

Reminder

General issues

- This project concentrates on defining a graphical concrete syntax for a language, if the abstract syntax is given.
- Tool a generic language editor
 - Part of TopModL project

Reminder

Define a language

- Definition :
 - Abstract synthax : MetaModel
 - Concrete synthax : Graphical templates
- Instantiation :
 - Abstract : Model
 - Concrete : Graphical representation

Reminder ProBXS

- Project of Fabrice Hong (Semester Project in Winter 2004)
- Concrete syntax graphical edition tool
- « SVG image becomes an editing tool »
 - Display representation based on SVG templates
 - DopiDom extension (dynamical behavior)

Reminder

DoPIDom

- Tool to build interactive environnements, masking the concept of application from user point of view
- Based on : DOM (documents)
 SVG (their representation)
- DoPIDom defines the concept of component & defines the behaviour that each component can have (Consumable actions or queries)
- DoPIDom also defines the concept of instrument & actions they can produce

Reminder DoPIDom

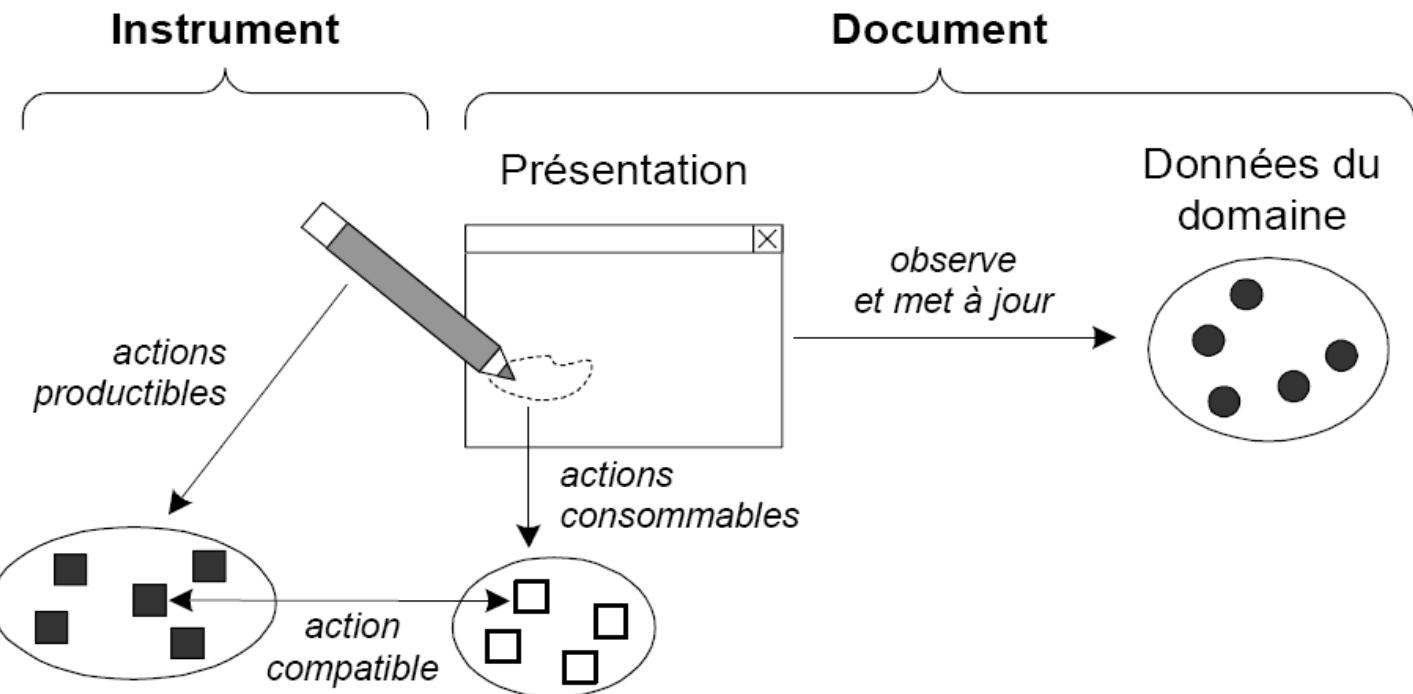

Figure 1: Principe du modèle DPI

Reminder DoPIDom

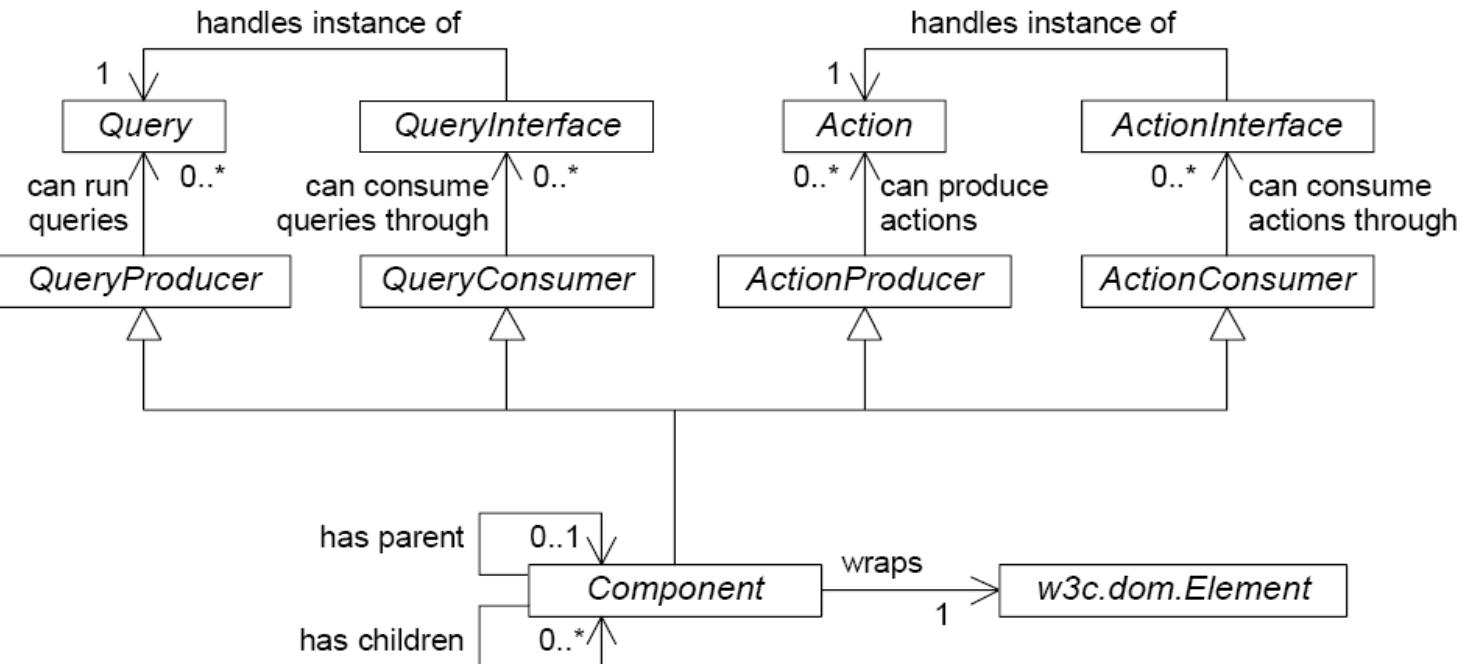

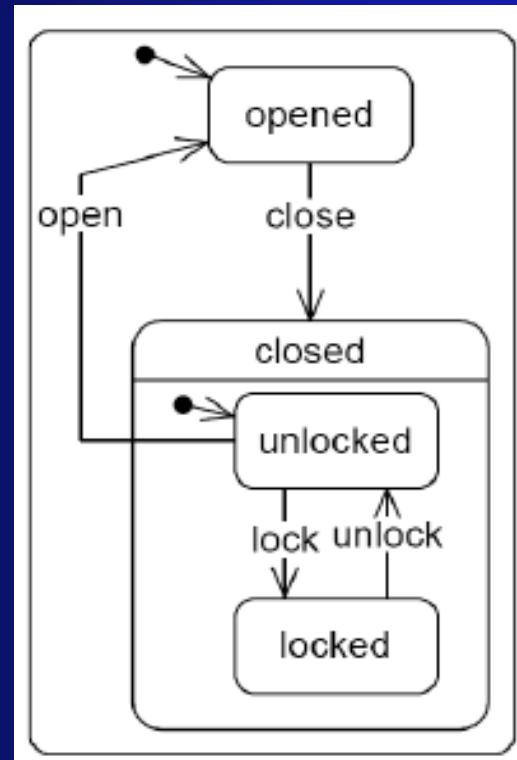

Figure 2: Modèle UML des composants interactifs

Reminder

Exemple of interaction

- Change the name of a state in statechart language

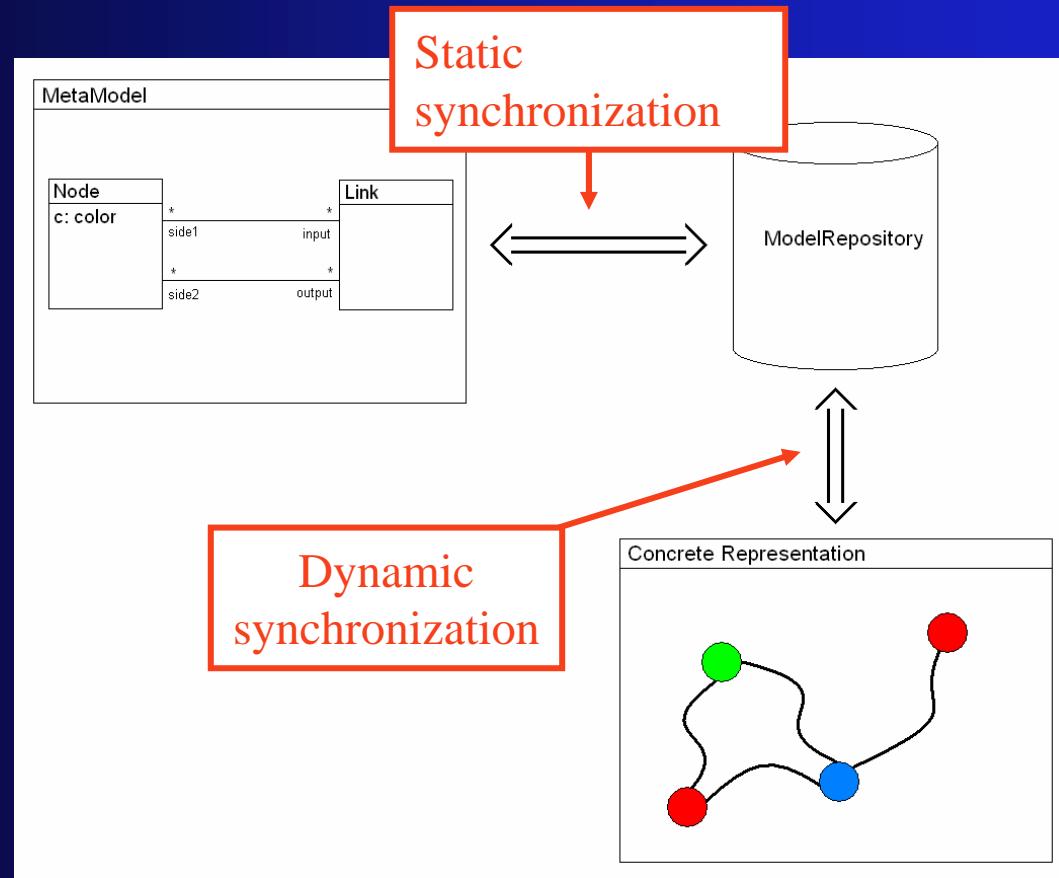

Reminder

Exemple of interaction

- Component « State » can consume the action « changeName » because it implements the interface « Namechangable »
- The interactor produces the action by clicking on the component and changing the name.
=> Our task now (rising synchronization) is to informe the model that the name changed in the graphical representation.

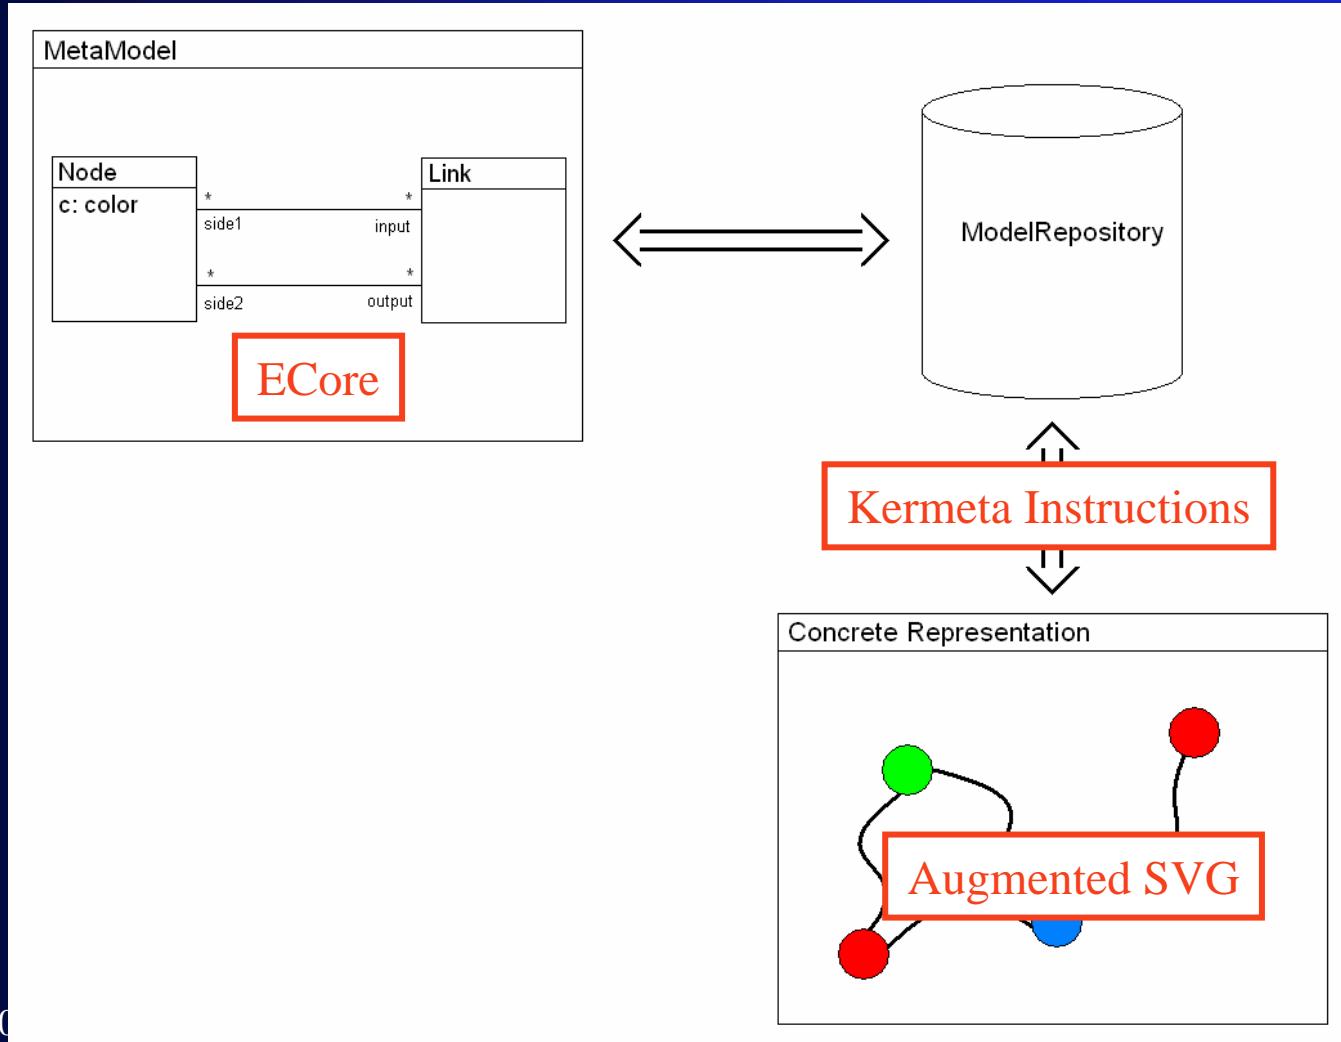

Reminder Problematic

- Need to keep synchronized display objects and representation templates

Reminder

Chosen technologies

Reminder

KerMeta

- What is KerMeta?
 - Metamodeling language
 - Defines
 - Structure of metamodel
 - Behavior of metamodel
 - High level of abstraction
 - We don't have to deal with the concept of repository
 - We just handle KerMeta's object and operations.

Switch

- Fabien will continue the presentation...

Plan

- Reminder
- What we have already done
- What we're working on
- Problems
- To do

Defining a new language

- Definition of the language
 - MetaModel => Ecore
 - Templates => SVG+ Templates
- Instanciation
 - Abstract representation => XMI
 - Concrete representation => SVG+

Creating a new language

MetaModel
(.kmt)

```
require kermeta
using kermeta::standard

class Node
{
    attribute c : color
    reference input : set Link[0..*]#input
    reference output : set Link[0..*]#output
}

class Link
{
    reference side1 : set Node[0..*]#input
    reference side2 : set Node[0..*]#output
}
```

MetaModel
(.ecore)

```
<?xml version="1.0" encoding="ASCII"?>
<ecore:EPackage xmi:version="2.0"
  xmlns:xmi="http://www.omg.org/XMI"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:ecore="http://www.eclipse.org/emf/2002/Ecore"
  name="src"
  nsURI="platform/resource/TestKermeta/src/SimplierExample/MetaModel.ecore" nsPrefix="src">
  <Classifiers xsi:type="ecore:EClass" name="Node">
    <eStructuralFeatures xsi:type="ecore:EAttribute" name="c"
      eType="//String"/>
    <eOperations xsi:type="ecore:EReference"
      ordered="false" eType="//Link"
      Link/!side1"/>
    <eOperations xsi:type="ecore:EReference"
      "ordered="false" eType="//Link"
      Link/!side2"/>
  </Classifiers>
  <Classifiers xsi:type="ecore:EClass" name="Link">
    <eStructuralFeatures xsi:type="ecore:EReference"
      name="side1" ordered="false" eType="//Node"
      eOpposite="//Node/input"/>
    <eStructuralFeatures xsi:type="ecore:EReference"
      name="side2" ordered="false" eType="//Node"
      eOpposite="//Node/output"/>
    <eClassifier>
      <Classifiers xsi:type="ecore:EDataType" name="String"
        instanceClassName="java.lang.String"/>
    </eClassifier>
  </Classifiers>
</ecore:EPackage>
```

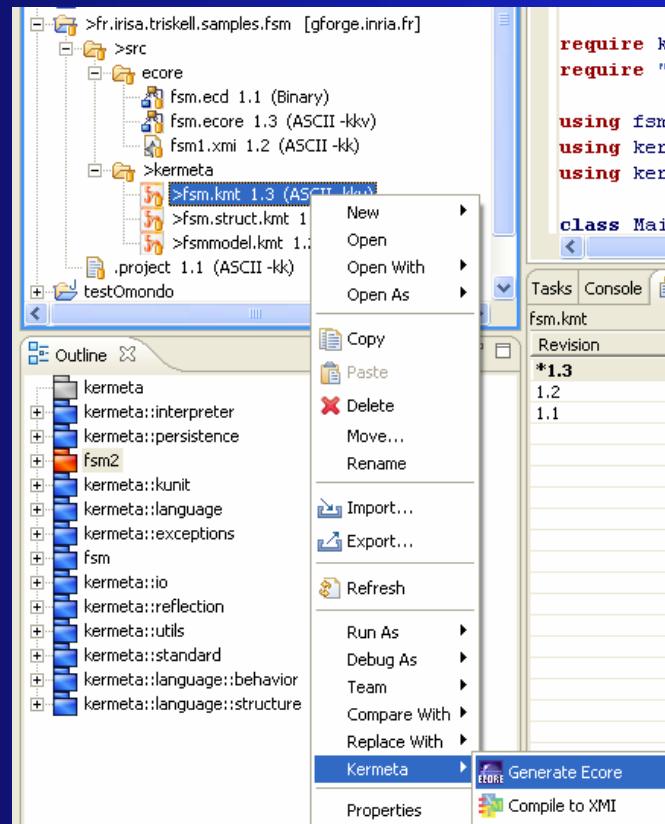

Kermeta2Ecore
transformation

Model
(.xmi)

```
<?xml version="1.0"
  encoding="ASCII"?>
<src:Node xmi:version="2.0"
  xmlns:xmi=
  "http://www.omg.org/XMI"
  xmlns:src="platform:/resource/TestKermeta/src/SimplierExample/MetaModel.ecore"
  c="Gris"/>
```

Kermeta2Ecore transformation

- Supported by Kermeta
- In eclipse environnement

Creating a new language

MetaModel
(.kmt)

```
require kermeta
using kermeta::standard

class Node
{
    attribute c : color
    reference input : set Link[0..*]#side1
    reference output : set Link[0..*]#side2
}

class Link
{
    reference side1 : set Node[0..*]#input
    reference side2 : set Node[0..*]#output
}
```

MetaModel
(.ecore)

```
<?xml version="1.0" encoding="ASCII"?>
<ecore:EPackage xmi:version="2.0"
  xmlns:xmi="http://www.omg.org/XMI"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:ecore="http://www.eclipse.org/emf/2002/Ecore"
  name="src"
  nsURI="platform/resource/TestKermeta/src/SimplierExample/MetaModel.ecore" nsPrefix="src">
  <Classifiers xsi:type="ecore:EClass" name="Node">
    <eStructuralFeatures xsi:type="ecore:EAttribute" name="c"
      eType="//String"/>
    <eStructuralFeatures xsi:type="ecore:EReference"
      name="input" ordered="false" eType="//Link"
      eOpposite="/Link(side1)"/>
    <eStructuralFeatures xsi:type="ecore:EReference"
      name="output" ordered="false" eType="//Link"
      eOpposite="/Link(side2)"/>
    <eClassifiers>
      <Classifiers xsi:type="ecore:EClass" name="Link">
        <eStructuralFeatures xsi:type="ecore:EReference"
          name="side1" ordered="false" eType="//Node"
          eOpposite="/Node/input"/>
        <eStructuralFeatures xsi:type="ecore:EReference"
          name="side2" ordered="false" eType="//Node"
          eOpposite="/Node/output"/>
        <eClassifiers>
          <Classifiers xsi:type="ecore:EDataType" name="String"
            instanceClassName="java.lang.String"/>
        </eClassifiers>
      </Classifiers>
    </eClassifiers>
  </Classifiers>
</ecore:EPackage>
```

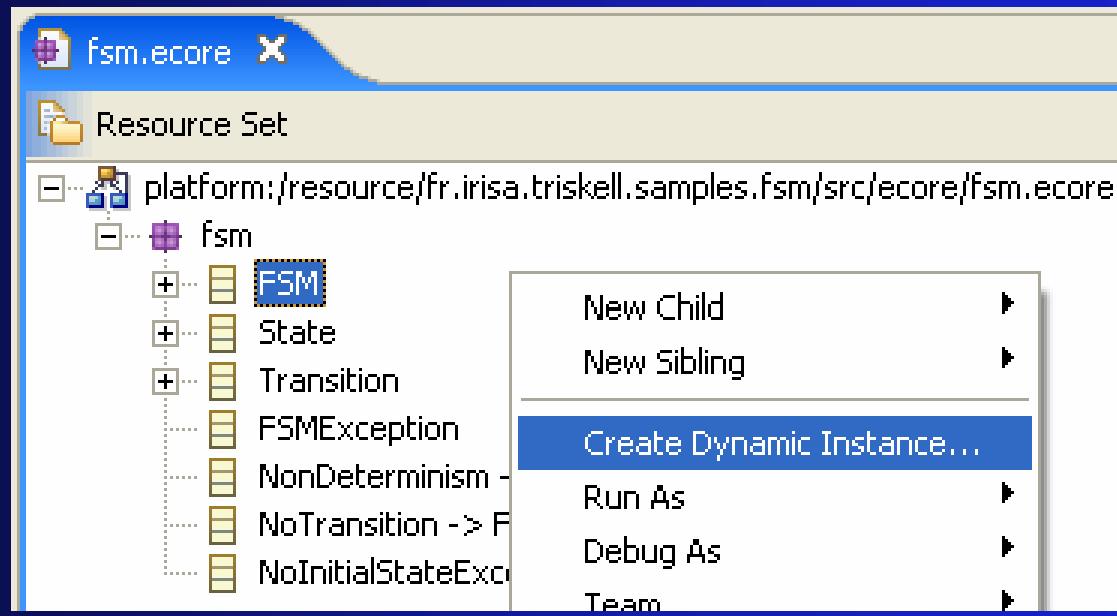

Model
(.xmi)

```
<?xml version="1.0"
  encoding="ASCII"?>
<src:Node xmi:version="2.0" 
  xmlns:xmi=
  "http://www.omg.org/XMI"
  xmlns:src="platform:/resource/TestKermeta
  /src/SimplierExample/
  MetaModel.ecore"
  c="Gris"/>
```

Kermeta

Creating a dynamic instance

- Ecore allow to create a dynamic instance of one specific element of the metamodel
- In eclipse environnement

Creating a new language

MetaModel
(.kmt)

```
require kermeta
using kermeta::standard

class Node
{
    attribute c : color
    reference input : set Link[0..*]#side1
    reference output : set Link[0..*]#side2
}

class Link
{
    reference side1 : set Node[0..*]#input
    reference side2 : set Node[0..*]#output
}
```

MetaModel
(.ecore)

```
<?xml version="1.0" encoding="ASCII"?>
<ecore:EPackage xmi:version="2.0"
  xmlns:xmi="http://www.omg.org/XMI"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:ecore="http://www.eclipse.org/emf/2002/Ecore"
  name="src"
  nsURI="platform/resource/TestKermeta/src/SimplierExample/MetaModel.ecore" nsPrefix="src">
  <Classifiers xsi:type="ecore:EClass" name="Node">
    <eStructuralFeatures xsi:type="ecore:EAttribute" name="c"
      eType="//String"/>
    <eStructuralFeatures xsi:type="ecore:EReference"
      name="input" ordered="false" eType="//Link"
      eOpposite="//Link(side1)"/>
    <eStructuralFeatures xsi:type="ecore:EReference"
      name="output" ordered="false" eType="//Link"
      eOpposite="//Link(side2)"/>
  </Classifier>
  <Classifiers xsi:type="ecore:EClass" name="Link">
    <eStructuralFeatures xsi:type="ecore:EReference"
      name="side1" ordered="false" eType="//Node"
      eOpposite="//Node/input"/>
    <eStructuralFeatures xsi:type="ecore:EReference"
      name="side2" ordered="false" eType="//Node"
      eOpposite="//Node/output"/>
  </Classifier>
  <Classifiers xsi:type="ecore:EDataType" name="String"
    instanceClassName="java.lang.String"/>
</ecore:EPackage>
```

Model
(.xmi)

```
<?xml version="1.0"
  encoding="ASCII"?>
<src:Node xmi:version="2.0"
  xmlns:xmi=
  "http://www.omg.org/XMI"
  xmlns:src="platform:/resource/TestKermeta/src/SimplierExample/MetaModel.ecore"
  c="Gris"/>
```

Kermeta

DoPIDom

Handle the Model with Kermeta

- One can handle the resource
 - Load it
 - Save it
 - Manipulate its elements (like a Dom tree)
 - Creating
 - Removing
 - Moving

Plan

- Reminder
- What we have already done
- **What we're working on**
- Problems
- To do

Rising synchronization

Interaction between DoPIDom & KerMeta

- Call the KerMeta interpreter from DoPIDom
- Handle KerMeta operations from DoPIDom
- Keep synchronized graphical elements with their abstract representation

Rising synchronization

- Add Kermeta instructions into SVG templates

Recover tag and attributes

- `<c:content query="{OCL | self.name.text}"
update(s:String)= "{KerMeta |
self.name.text := s}">`

Allow multilanguage

Identification of « self »

Plan

- Reminder
- What we have already done
- What we're working on
- Problems
- To do

Difficulties

Intrinsic problem with the language

- Kermeta is a young language
 - Some annoying bugs
 - Problems in the transition kermeta2ecore
 - Problems when we want to save the model
 - Bad error localization
 - Obsolete tutorials
 - Lack of documentation
- But good contact with the developpers

Difficulties

- Understand DoPIDom architecture
 - We need to know some details of implementation because we have to interact and add new features to the project.

Plan

- Reminder
- What we have already done
- Problems
- To do

TO DO : Further step

- Descendent synchronization!

Time for questions!
